

RE: All VS Family Mounting

Depending on the build of your particular violin, you may find it helpful to use the included suede stripping. The VS violin clamp is made at an angle that allows the clamp to tighten down around the often-raised rim of the violin. AMT has designed the clamp in this way to allow less dampening of the sound board of the instrument. Keeping the pressure the clamp on the rim allows for the instrument to project more and to not change the acoustic sound produced by the instrument. The suede is included as EXTRA protection which allows you to tighten down the clamp. The suede also will help to protect the wood finish of the violin. And excessive amount of pressure is NOT needed when using the suede to keep them mic in place.
